Ceragyn Stall Disinfectant

Antimicrobial, Antiviral & Antifungal Disinfectant

Ceragyn Stall Disinfectant is a biodegradable disinfectant that kills viruses, bacteria and fungi. Use on surfaces, containers and troughs. Each container of concentrate yields 5 gallons of disinfectant. Ceragyn products are formulated to mimic natural antimicrobial peptides with efficacy against bacteria, lipid enveloped viruses, fungus and yeast. Safe for all animals use.

Endogenous Antimicrobial Peptides have a very broad spectrum of activity against bacteria, fungus and lipid-enveloped viruses. These peptides are bactericidal in all animals, killing very rapidly and are synergistic with conventional antibiotics. Purifect™ Technology is a mimic to the broad-spectrum activity and biofilm eradication properties of nature's antimicrobial peptides. Purifect™ compounds have been shown to be effective against gram-negative and gram-positive pathogens, fungus and lipid-enveloped viruses. Purifect™ compounds protect both living and inanimate surfaces against pathogenic colonization of bacteria along with biofilms.

Directions for use

To Dilute Concentrate to Optimal Level: Mix entire contents of bottle in 5 gallons of cool water.

For Small Quantities: Mix 50 ml of concentrate into 1 gallon of cool water.

Clean debris and dirt from stalls.

Spray surfaces until saturated. Can be sprayed in water containers and feed troughs. no rinsing necessary

Not for topical application

Active Ingredients: Purifect™ Technology , Ethoxydiglycol, Propylene Glycol, Water

Available Size: 8 (250 ml)bottle
